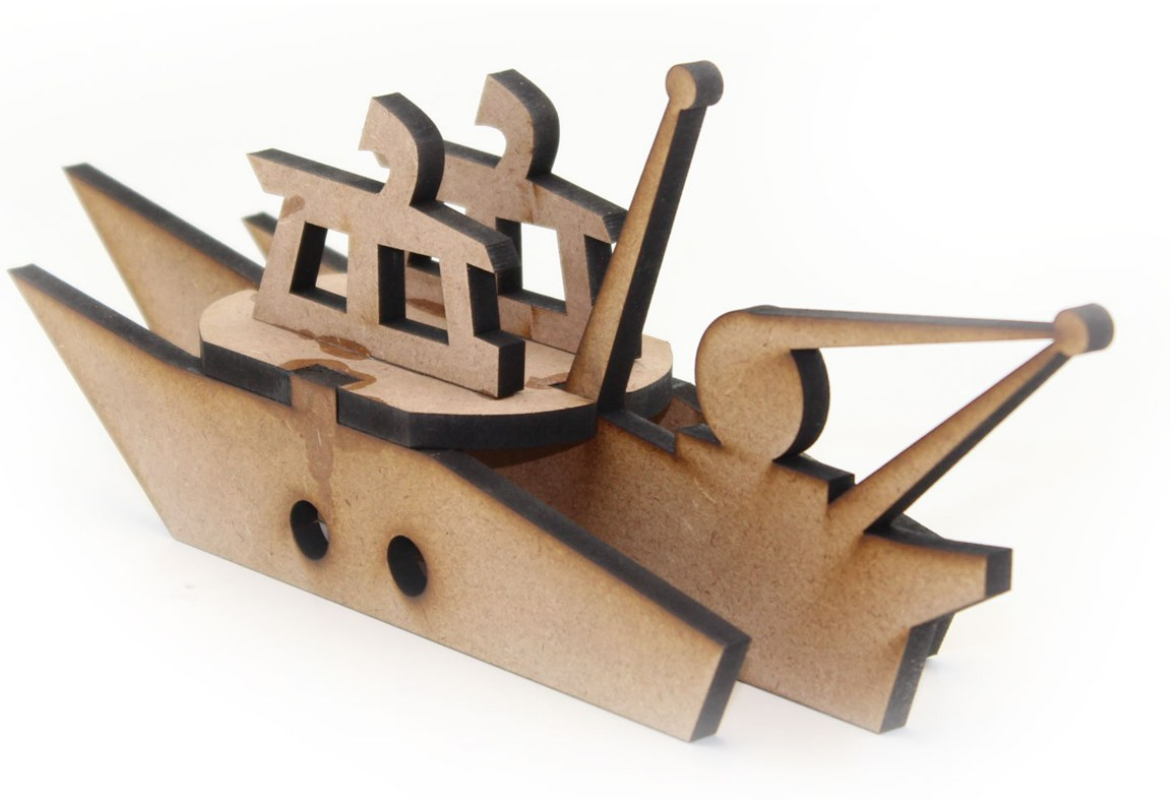
3D WOODEN MODEL

Toddler Toys Collection



Little Rider Tug

Assembly Guide | SKU: TT_41

www.wowwe.co.za

BEFORE YOU START

Read this page first. It only takes a minute.

Go gently: this is wood, not plastic.

Your kit is laser-cut from wood board. It is strong once put together, but thin parts can snap if you force them.

Test-fit first. Push each piece into place without glue to see how it goes. If a joint is tight, sand it lightly; never hammer or twist it in.

Use ordinary wood glue (white PVA glue). A small dab in each joint is enough.

Clean the edges. Wipe off laser burn marks with a slightly damp cloth or an alcohol wipe.

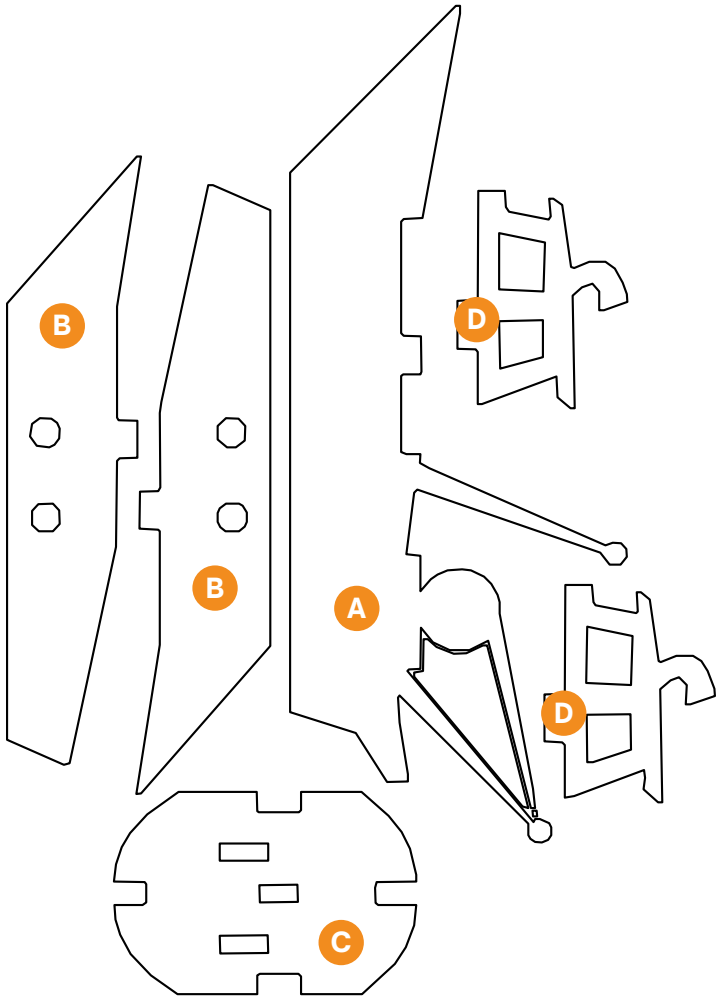
Grown-ups build, little ones play. An adult should put this model together. Keep loose pieces away from small children until the glue is completely dry.

Make it yours. Paint it with child-safe paint and seal it with a clear wood sealer so it lasts.

You will need: wood glue • fine sandpaper • a damp cloth • child-safe paint (optional)

WHAT'S IN THE BOX

Check that you have all 6 pieces before you start.



- **A** Piece A × 1
- **B** Piece B × 2
- **C** Piece C × 1
- **D** Piece D × 2

Each letter in the drawing shows which piece is which.

STEP 1

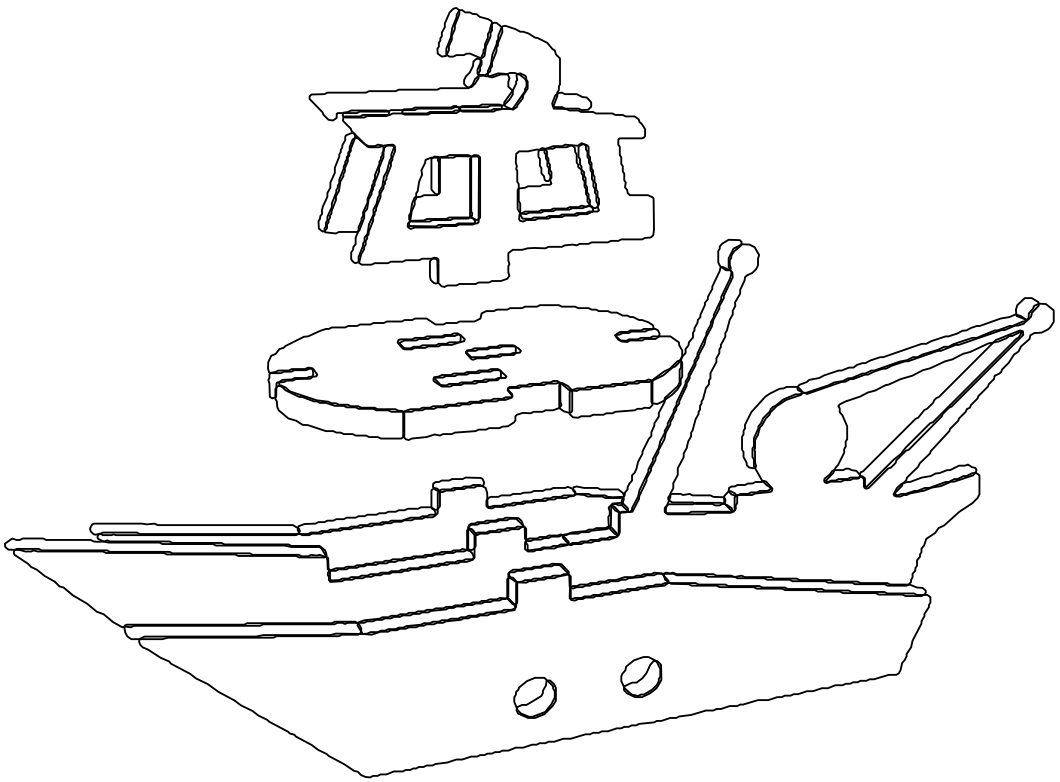
Build your model

1. **Test-fit first**
   Slot the pieces together without glue, the way the drawing shows, to see where each one goes.

2. **Glue and assemble**
   Take them apart again, put a small dab of wood glue in each slot and push the pieces back together.

3. **Let it dry**
   Wipe away any glue that squeezes out and leave the model on a flat surface for a few hours (overnight is best).

4. **Decorate (optional)**
   Paint it with child-safe paint, then add a clear sealer.



ALL DONE!

Your Little Rider Tug is ready to play.
