

3D WOODEN MODEL

Toddler Toys Collection

VW New Beetle

Assembly Guide | SKU: TT_34

www.wowwe.co.za

BEFORE YOU START

Read this page first. It only takes a minute.

Go gently: this is wood, not plastic.

Your kit is cut from MDF (Supawood). It is strong once glued, but thin parts can snap if you force them.

Test-fit first. Push each piece into place without glue to see how it goes. If a joint is tight, sand it lightly; never hammer or twist it in.

Clean the edges. Wipe off laser burn marks with a slightly damp cloth or an alcohol wipe.

Use ordinary wood glue (white PVA glue). A small dab in each joint is enough.

Grown-ups build, little ones play. An adult should put this model together. Keep loose pieces away from small children until the glue is completely dry.

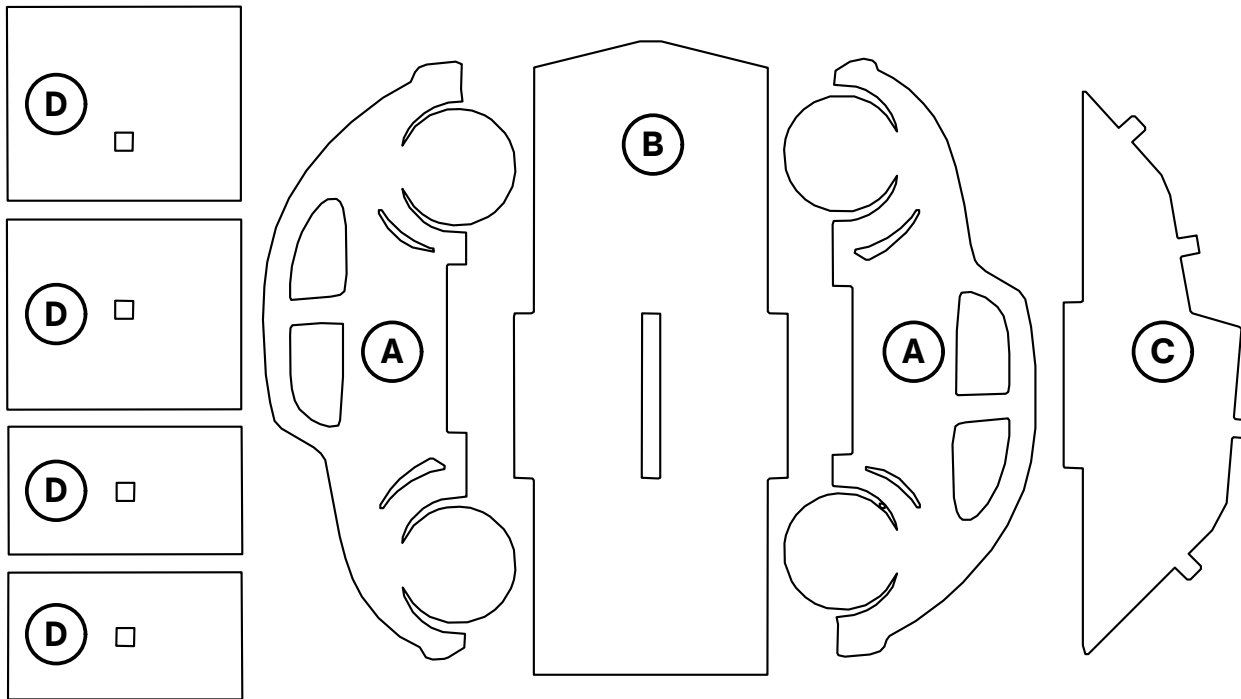

Make it yours. Once dry, paint it with child-safe paint and seal it with a clear wood sealer so it lasts.

If something breaks, don't worry: it's wood, so you can always glue it back together.

You will need: wood glue • fine sandpaper • a damp cloth • child-safe paint (optional)

WHAT'S IN THE BOX

Check that you have all 8 pieces before you start.

A Side panels
x 2

B Base
x 1

C Centre spine
x 1

D Top panels
x 4

You will also need: wood glue,
fine sandpaper and a damp
cloth.

STEP 1

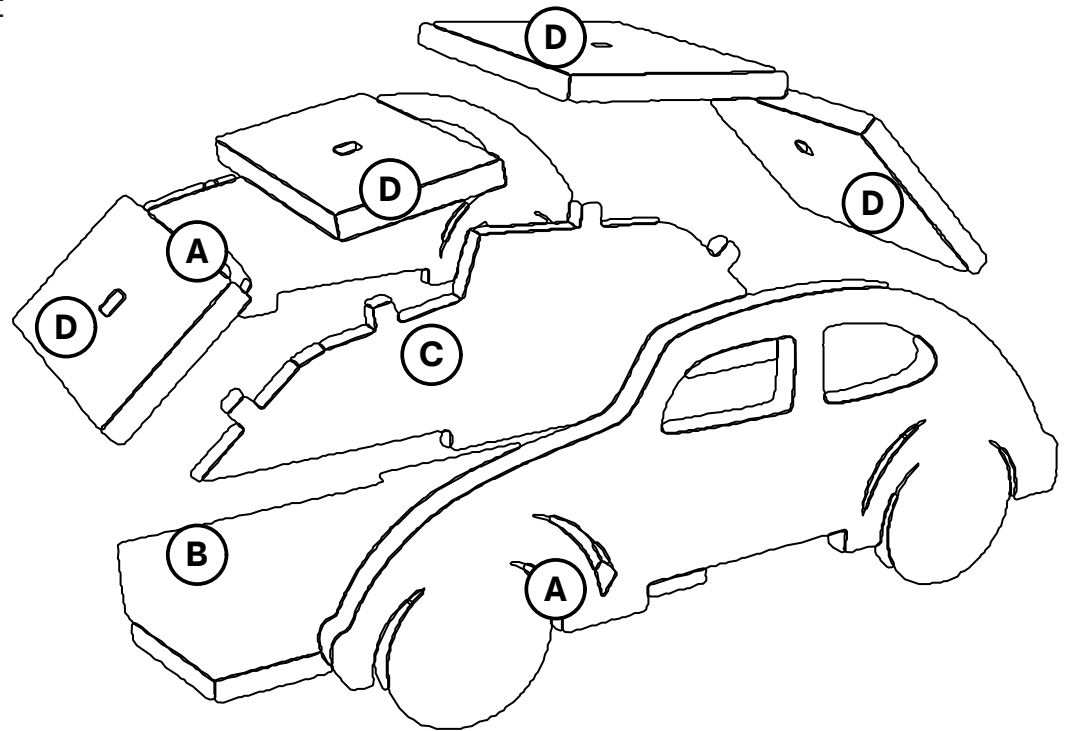

Build the body

1 Spine onto the base
Stand the centre spine (C) upright on the base (B) so it lines up with the slot down the middle. Check the fit, then glue.

2 Add the sides
Fit a side panel (A) on each side. The notches on the panels hook over the tabs on the edge of the base. The wheels go on the outside.

3 Check it is square
Look from the front: both sides should stand straight and the wheels should touch the table evenly.

STEP 2

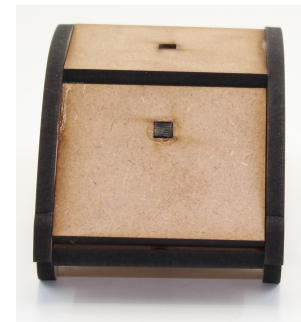

Fit the top panels

- 4 Line up the holes**
Each top panel (D) has a small square hole. It slides down over a tab sticking up from the spine (C).
- 5 Front to back**
Start with the bonnet at the front, then the windscreen panel, the roof and finally the back panel.
- 6 Glue and press**
Put a little glue where each panel meets the sides, then press down gently until the tab shows through the hole.

Rear view

STEP 3

Finish and let it dry

7 Clean up
Wipe away any glue that squeezed out before it dries.

8 Let it dry
Leave the car on a flat surface for a few hours (overnight is best) before anyone plays with it.

9 Decorate (optional)
Paint it in your favourite colour with child-safe paint, then add a clear sealer.

ALL DONE!

Your VW New Beetle is ready to roll.
